

```
class EvenOdd { //class name
static void isEven(int num) { //this is method with one parameter

        if(num%2==0) {
//if block is checking that num modulo by two equals to zero or not
                System.out.println("This is Even number");//message! if condition
is true
        }else {
                System.out.println("This is Odd number");//message if condition
is false
        }
        }

        public static void main(String[] args) { //main method to entry
                isEven(656); //method calling
        }
}
```
